

General Specifications

μ R20000
Recorder

GS 04P02B01-01E

The μ R20000 is a compact recorder with a recording width of 180mm. The model family consists of 1, 2, 3, 4 pen and a 6,12,18, 24 dot models. Pen model realizes continuous recording for each channel, whereas the dot model realizes a high speed of 6 dot / 10 sec, 12 dot / 15 sec, 18 dot / 20 sec, 24 dot / 30 sec. The input is universal input. High reliability is realized by contact-free technology, such as high withstand voltage semiconductor relays, and pen servo unit using an ultra-small stepping motor. The versatile display such as multi-channel digital display, bar graph display, flag display, DI/DO status display, and date/time display are provided with 181×16 VFD dot display.

The μ R20000 can be used as a monitoring device and as a quality control instrument in many applications (such as process temperature monitoring, pollution, construction, furnaces, field of medical diagnosis, field of refrigerating, etc.).

*including the measurement accuracy at linear scaling.

Accuracy in case of scaling:

Accuracy during scaling (digits) =

measuring accuracy (digits) \times multiplier + 2 digits
(rounded up)

Where the multiplier = scaling span digits / recording span digits

Example:

DCV 6V range

recording span : 1.000 to 5.000V

scaling span : 0.000 to 2.000

measuring accuracy = $\pm (0.3\% \times 5V + 2 \text{ digits})$
 $\pm (0.015V (15 \text{ digits}) + 2)$
 $\pm (17 \text{ digits})$

multiplier = 2000 digits (0.000 to 2.000 / 4000 digits
(1.000 to 5.000V) = 0.5

Accuracy during scaling = $17 \text{ digits} \times 0.5 + 2 = 11 \text{ digits}$
